STATEMENT OF PURPOSE

Name- Veer Nagda

Branch & Stream - BTI COMPUTER ENGINEERING

Year- 3

Departments Applying For: Web Development, Business Development

Past Experiences: Executive in IETE-SF External Management, MUNSOC Tech
Actively developing websites as a Freelancer
Currently pursuing a course on back end web development
Familiar with HTML, CSS, JS, JAVA, PYTHON, C

Achievements: Made many websites using HTML, CSS, JS including my first freelance project (Jain Education Society),
Participated in some MUNs, Hackathons
I am going to be a Marketing Intern for my Father's Company (Kitchen Essentials) from July

Core Competencies: I am well versed in Front end web development
I have marketing experience with IETE Last year for various stall and kind deals
I am a hardworking and passionate individual

Why Are you suited for the post?

I am a hardworking and perseverant individual who will never stop no matter how hard the situation gets. I am very capable of thinking on the feet and have good leadership skills and a determined attitude.
Last year as an executive for EM, I have contributed significantly by bringing multiple stall and hamper deals for our events and will continue to do the same, and more.
I am an easy going person with fine people skills and lot of scope for learning further and contributing to the team the most.
If I were to be made the subhead, I would have the platform to showcase my leadership skills and help excel the committee as a whole.

PLAN OF ACTION

How many executives do you expect to have in your chosen department(s)?   6-8 execs

How will your department function? What plans do you have for your department in particular?

How do you plan on making Google DSC better?

With my past experiences, one of the best ways to make any committee better is to have a friendly and welcoming environment with strong leadership and constant communication between the members so that everyone contributes and gives their best for the committee.
Also, selecting the correct execs who are skilled and passionate towards the committee is a must.

1. I would firstly setup meetings with all the members of the department so that they can get to know each other and learn to function as a team and maintain a chill environment.
2. I would also have regular conversations with the members to keep check on progress relating to the different events.
For Web Development,
I would firstly assign the execs with specific roles such as front end, back end, etc according to their skillset so as to give them clarity on their roles in the department.
I would keep some sessions with the execs to give basic information on some languages and frameworks.

For Business Development,
I would train the execs with cold callings, give them tips on how to bring in sponsors, stalls, deals, etc.
A major part of it would be motivating the members to keep working and not stop when it feels like a dead end and share my experiences and knowledge with them.
